BOLDSTAR INFRARED SERVICES INC.

The Property Management Advantage

What Can an Infrared Inspection and Report Do For the Roof Consultant or Roof Owner?

- Clearly identify moisture damaged roof material below the surface. Actually “see” where moisture is located.
- Our reports give a complete damage report of your roof. CAD drawings available. Full colour reports.
- Why replace the entire roof when only a portion requires it? Scan your roof before the warranty expires.

Unmatched Advantages

- Infrared roof surveys are non-destructive and non-contact.
- Infrared images allow damaged sections to be accurately located and identified.
- When damaged sections are fully understood, repair costs are lowered.
